

High Blood Pressure Fact Sheet

What is High Blood Pressure?

High blood pressure also called hypertension, means the pressure of the blood in your blood vessels is higher than it should be. Blood pressure normally rises and falls throughout the day. But if it stays high for a long time, it can damage your heart and lead to health problems. About 9 of 10 Americans will develop high blood pressure during their lifetimes.

Signs & Symptoms

High blood pressure has no warning signs or symptoms, and many people do not know they have it. The only way to know if you have it is to measure your blood pressure. Then you can take steps to control it if it is too high.

What You Should Know About High Blood Pressure

- Prehypertension increases your risk of high blood pressure.
- Tobacco use increases your risk for high blood pressure.
